2006 version

Rhode Island Mathematics Grade-Level Expectations Correlated to *Moving with Math Extensions Grade 7*

		Student Book	Skill Builders
NUMBER AND OPERATIONS			
M(N&O)-7-1	Demonstrates conceptual understanding of rational numbers with respect to percents as a means of:		
•	comparing the same or different parts of the whole when the wholes vary in magnitude (e.g., 8 girls in a classroom of 16 students compared to 8 girls in a classroom of 20 students, or 20% of 400 compared to 50% of 100);		
•	percents as a way of expressing multiples of a number (e.g., 200% of 50) using models, explanations, or other representations.	52	
•	Demonstrate conceptual understanding of rational numbers with respect to square roots of perfect squares, rates, and proportional reasoning.	49, 50	46-1
M(N&O)-7-2	Demonstrates understanding of the relative magnitude of numbers by ordering, comparing, or identifying equivalent rational numbers across number formats, numbers with whole number bases and whole number exponents (e.g., 3^3 , 4^3), integers, absolute values, or numbers represented in scientific notation using number lines or equality and inequality symbols	23, 25	11-4
M(N&O)-7-3	Demonstrate conceptual understanding of operations with integers and whole number exponents (where the base is a whole number) using models, diagrams, or explanations.		6-1, 48-1, 48-2
M(N&O)-7-4	Accurately solves problems involving:		
•	proportional reasoning;	49, 50	46-1
•	percents involving discounts, tax, or tips;	46 (T.G.), 53	28-1
•	rates.		
	addition or subtraction of integers, raising numbers to whole number powers, and determining square roots of perfect square numbers and non-perfect square numbers.	20	6-1
M(N&O)-7-5	No GLE at this grade		
M(N&O)-7-6	Uses a variety of mental computation strategies to:		

	<ul style="list-style-type: none"> • solve problems (e.g., using compatible numbers, applying properties of operations, using mental imagery, using patterns) and to determine the reasonableness of answers; 	10, 12	
	<ul style="list-style-type: none"> • mentally calculates benchmark perfect squares and related square roots (e.g., 1^2, 2^2...12^2, 15^2, 20^2, 25^2, 100^2, 1000^2); 		
	<ul style="list-style-type: none"> • determines the part of a number using benchmark percents and related fractions (1%, 10%, 25%, 33 1/3%, 50%, 66 2/3%, 75%, and 100%) (e.g., 25% of 16; 33 1/3% of 330). 	52	27-2
M(N&O)-7-7	Makes estimates in a given situation (including tips, discounts, and tax) by identifying when estimation is appropriate, selecting the appropriate method of estimation, determining the level of accuracy needed given the situation, analyzing the effect of the estimation method on the accuracy of results, and evaluating the reasonableness of solutions appropriate to grade level GLEs across content strands.	34	
M(N&O)-7-8	Applies properties of numbers (odd, even, remainders, divisibility, and prime factorization) and field properties (commutative, associative, identity, distributive, inverses) to solve problems and to simplify computation , and demonstrates conceptual understanding of field properties as they apply to subsets of the real numbers (e.g., the set of whole numbers does not have additive inverses, the set of integers does not have multiplicative inverses).	4, 5	2-1, 2-2, 6-2
	GEOMETRY AND MEASUREMENT		
M(G&M)-7-1	Uses properties of angle relationships resulting from two or three intersecting lines (adjacent angles, vertical angles, straight angles, or angle relationships formed by two non-parallel lines cut by a transversal), or two parallel lines cut by a transversal to solve problems.	61	33-1
M(G&M)-7-2	Applies theorems or relationships (triangle inequality or sum of the measures of interior angles of regular polygons) to solve problems.	61	33-1
M(G&M)-7-3	No GLE at this grade.		
M(G&M)-7-4	Applies the concepts of congruence by solving problems on a coordinate plane involving reflections, translations, or rotations.		

M(G&M)-7-5	Applies concepts of similarity by solving problems involving scaling up or down and their impact on angle measures, linear dimensions and areas of polygons and circles when the linear dimensions are multiplied by a constant factor. Describes effects using models or explanations.		46-2
M(G&M)-7-6	Demonstrates conceptual understanding of the areas of circles or the area or perimeter of composite figures (quadrilaterals, triangles, or parts of circles), and the surface area of rectangular prisms, or volume of rectangular prisms, triangular prisms, or cylinders using models, formulas, or by solving related problems. Expresses all measures using appropriate units.	75, 76	29-2, 40-1, 41-1
M(G&M)-7-7	No GLE at this grade.		
M(G&M)-7-8	No GLE at this grade.		
M(G&M)-7-9	No GLE at this grade.		
M(G&M)-7-10	Demonstrate conceptual understanding of:		
	<ul style="list-style-type: none"> spatial reasoning and visualization by sketching three-dimensional solids; 	75 (T.G.)	
	<ul style="list-style-type: none"> draws nets of rectangular and triangular prisms, cylinders, and pyramids and uses the net as a technique for finding surface area. 		
	FUNCTIONS AND ALGEBRA		
M(F&A)-7-1	Identifies and extends to specific cases a variety of:		
	<ul style="list-style-type: none"> patterns (linear and nonlinear) represented in models, tables, sequences, graphs, or in problem situations 	16	42-1
	<ul style="list-style-type: none"> generalizes a linear relationship using words and symbols; 	16	42-1
	<ul style="list-style-type: none"> generalizes a linear relationship to find a specific case 	16	
	<ul style="list-style-type: none"> writes an expression or equation using words or symbols to express the generalization of a nonlinear relationship. 		42-1
M(F&A)-7-2	Demonstrates conceptual understanding of:		
	<ul style="list-style-type: none"> linear relationships ($y = kx$; $y = mx + b$) as a constant rate of change by solving problems involving the relationship between slope and rate of change, by describing the meaning of slope in concrete situations, or informally determining the slope of a line from a table or graph; 		
	<ul style="list-style-type: none"> informally determining the slope of a line from a table or graph 		

	<ul style="list-style-type: none"> distinguish between constant and varying rates of change in concrete situations represented in tables or graphs 		
	<ul style="list-style-type: none"> describes how change in the value of one variable relates to change in the value of a second variable in problem situations with constant rates of change. 	16 (T.G.)	
M(F&A)-7-3	Demonstrates conceptual understanding of:		
	<ul style="list-style-type: none"> algebraic expressions by using letters to represent unknown quantities to write algebraic expressions (including those with whole number exponents or more than one variable); 	15	50-1
	<ul style="list-style-type: none"> by evaluating algebraic expressions (including those with whole number exponents or more than one variable) 	72, 74	
	<ul style="list-style-type: none"> by evaluating an expression within an equation (e.g., determine the value of y when $x = 4$ given $y = 5x^3 - 2$). 	72	
M(F&A)-7-4	Demonstrates conceptual understanding of:		
	<ul style="list-style-type: none"> equality by showing equivalence between two expressions (expressions consistent with the parameters of the left- and right-hand sides of the equations being solved at this grade level) using models or different representations of the expressions, solving multi-step linear equations of the form $ax + b = c$ with $a \neq 0$, where a, b, c and d are whole numbers; 	21, 22	
	<ul style="list-style-type: none"> translating a problem-solving situation into an equation consistent with the parameters of the type of equations being solved for this grade level. 	15	
	DATA, STATISTICS, AND PROBABILITY		
M(DSP)-7-1	Interprets a given representation (circle graphs, scatter plots that represent discrete linear relationships or histograms) to analyze the data to formulate or justify conclusions, to make predictions, or to solve problems.	80	47-3
M(DSP)-7-2	Analyzes patterns, trends, or distributions in data in a variety of contexts by:		
	<ul style="list-style-type: none"> solving problems using measures of central tendency (mean, median, or mode), dispersion (range or variation), or outliers to analyze situations to determine their effect on mean, median, or mode; 	17, 18	45-2
	<ul style="list-style-type: none"> evaluates the sample from which the statistics were developed (bias). 		

M(DSP)-7-3	Identifies or describes representations or elements of representations that best display a given set of data or situation , consistent with the representations required in M(DSP)-7-1.		
	Organizes and displays data using tables, line graphs, scatter plots, and circle graphs to answer questions related to the data, to analyze the data to formulate or justify conclusions, to make predictions, or to solve problems.		47-2
M(DSP)-7-4	Uses counting techniques to solve problems in context involving combinations or permutations (e.g., How many different ways can eight students place first, second, and third in a race?) using a variety of strategies (e.g., organized lists, tables, tree diagrams, models, Fundamental Counting Principle, or others).		47-4
M(DSP)-7-5	For a probability event in which the sample space may or may not contain equally likely outcomes:		
	<ul style="list-style-type: none"> determines the experimental or theoretical probability of an event in a problem-solving situation; 		47-1
	<ul style="list-style-type: none"> predicts the theoretical probability of an event and tests the prediction through experiments and simulations; 	77	47-1
	<ul style="list-style-type: none"> compares and contrasts theoretical and experimental probabilities. 		
M(DSP)-7-6	In response to a teacher or student generated question by hypothesis:		
	<ul style="list-style-type: none"> decides the most effective method (e.g., survey, observation, experimentation) to collect the data (numerical or categorical) necessary to answer the question; 		
	<ul style="list-style-type: none"> collects, organizes, and appropriately displays the data; 	17	47-2
	<ul style="list-style-type: none"> analyzes the data to draw conclusions about the question or hypotheses being tested while considering the limitations that could affect interpretations; 	17	
	when appropriate makes predictions	17	
	<ul style="list-style-type: none"> asks new questions and makes connections to real world situations. 	17 (T.G.)	47-2
	PROBLEM SOLVING, REASONING, AND PROOF		
M(PRP)-8-1	Students will use problem-solving strategies to investigate and understand increasingly complex mathematical content and be able to:		

	• Use problem-solving strategies appropriately and effectively for a given situation.	13	
	• Determine, collect and organize the relevant information needed to solve real-world problems.	13	
	• Apply integrated problem-solving strategies to solve problems in the physical, natural, and social sciences and in pure mathematics.	2	
	• Use technology when appropriate to solve problems.	44	
	• Reflect on solutions and the problem-solving process for a given situation and refine strategies as needed.	13 (T.G.)	
M(PRP)-8-2	Students will use mathematical reasoning and proof and be able to:		
	• Draw logical conclusions and make generalizations using deductive and inductive reasoning.	5	
	• Formulate, test, and justify mathematical conjectures and arguments.	22	
	• Construct and determine the validity of a mathematical argument or a solution.	73 (T.G.)	
	• Apply mathematical reasoning skills in other disciplines.	54	
	COMMUNICATION, CONNECTIONS, AND REPRESENTATIONS		
M(CCR)-8-1	Students will communicate their understanding of mathematics and be able to:		
	• Articulate ideas clearly and logically in both written and oral form.	Throughout	
	• Present, share, explain, and justify thinking with others and build upon the ideas of others to solve problems.	Throughout	
	• Use mathematical symbols and notation.		1-1
	• Formulate questions, conjectures, definitions, and generalizations about data, information, and problem situation.	4, 5	
M(CCR)-8-2	Students will create and use representations to communicate mathematical ideas and to solve problems and be able to:	27 (T.G.)	
	• Use models and technology to develop equivalent representations of the same mathematical concept.	24	
	• Use and create representations to solve problems and organize their thoughts and ideas.	19	
	• Convert between representations (e.g., a table of values, an equation, and a graph may all be representations of the same function).		

M(CCR)-8-3	Students will recognize, explore, and develop mathematical connections and be able to:		
•	Connect new mathematical ideas to those already studied and build upon them.	35	
•	Understand that many real-world applications require an understanding of mathematical concepts (e.g., personal finance, running a business, building a house, following a recipe, or sending a rocket to the moon).	53	15-1
•	Explain in oral and written form the relationships between a real-world problem and an appropriate mathematical model.	57	
•	Explain in oral and written form the relationships among various mathematical concepts (e.g., the relationship between exponentiation and multiplication).	6
